

FlaxSkirt installation instructions

1. Cut and remove the sod 2 inches in from the edge of the FlaxSkirt all the way around. 2. Undercut the sod 2 inches at the soil line.

3. Lift sod slightly to tuck the FlaxSkirt securely between the sod and the soil.

4. Trim the opening around the tree trunk to leave a slight gap between the FlaxSkirt and tree trunk.

An alternate method of securing the FlaxSkirt in place around your tree is with turf staples.
